Security Engineer | Detection Engineering | Threat Hunting

Cybersecurity Engineering graduate focused on detection engineering, threat hunting, security telemetry, & AI-assisted security automation. Built Linux host telemetry pipelines, developed SOC-style investigation workflows, used Python/Bash to automate security data collection, & created an AI-enhanced SSH honeypot that converts attacker behavior into structured threat intelligence.

WORK EXPERIENCE

Security Analyst Intern

06/2023 – 05/2024 | Pune, India

SecureThings

- Improved detection visibility by converting Linux process, network, filesystem, disk I/O, memory, and kernel activity into real-time security telemetry for investigation and threat hunting.
- Helped remediate 18 API and web security findings across a threat-intelligence platform, including missing rate limits, injection flaws, IDOR, session hijacking, and cookie manipulation.
- Analyzed host activity, network traffic, filesystem changes, and system behavior to identify suspicious patterns and support alert triage, anomaly review, and remediation prioritization..

Security Researcher Intern

08/2021 – 09/2021 | Remote

Cybersage

- Researched malware, botnet, phishing, ransomware, and data-breach incidents to identify IOCs, attacker patterns, affected assets, and security tool gaps.

PROJECTS

Linux OS Telemetry

01/2024 – 05/2024

- Built a reusable Linux telemetry pipeline that centralized 10+ real-time activity streams for detection engineering, anomaly review, threat hunting, and incident investigation workflows..
- Automated attacker-behavior analysis by generating behavior labels, risk levels, IOCs, source context, rationale, and session summaries from SSH command activity..

Adaptive AI-Driven Honeypot for Evolving Network Threats

09/2025 – 06/2026

- Built an AI-enhanced SSH honeypot that safely captures attacker commands and converts raw activity into structured threat intelligence.
- Automated security triage by generating behavior labels, risk levels, IOCs, source context, rationale, and session summaries from attacker sessions.
- Developed a SOC-style dashboard for live monitoring, severity triage, IOC inspection, and source-centric investigation.

EDUCATION

Master of Science in Cybersecurity Engineering

09/2024 – 06/2026 | Bothell, WA

University of Washington | GPA: 3.93/4

B.Tech in Computer Science & IT | Specialization in Cybersecurity

08/2020 – 08/2024 | Pune, India

Symbiosis Skills & Professional University | GPA: 9.27/10

PUBLICATIONS & HONORS & CERTIFICATIONS

IEEE ICDCS 2026: An AI-Enhanced SSH Honeypot for Real-Time Threat Intelligence and Interactive Security Analytics

University of Washington Graduate Impact and Innovation 2026 STEM Award

CompTIA Security+

SKILLS

Security: Detection Engineering, Threat Hunting, Security Engineering, Incident Response Support, Threat Detection, SIEM/Log Analysis, IOC Analysis, Vulnerability Assessment, Security Triage

Detection & Analysis: Security Telemetry, Anomaly Review, Alert Triage, Log Parsing, Threat Intelligence, MITRE ATT&CK, Cyber Kill Chain, IDS/IPS Concepts

Systems & Networking: Linux Security, Windows Fundamentals, TCP/IP, DNS, HTTP/S, SSH, Network Traffic Analysis

Tools: Wireshark, tshark, Burp Suite, Nmap, Metasploit, Snort, auditd, inotifywait, Kali Linux, AWS CL, AI-Assisted Security Workflows

Programming & Data: Python, Bash, SQL, JSON Logging, FastAPI, WebSockets, LLM-Assisted Threat Analysis
